

CLIENT TRAINING · ACCOUNT MANAGEMENT · BRAND GROUNDWORK

Show It. Don't Just Describe It.

Sample Writings & Presentations in Verilume: why real examples beat any adjective, what the library does with them, and the six steps that teach the AI how you actually write — including what you've rejected.

Read time: 12 minutes · Setup time: 30–45 minutes · Payback: every draft after

SESSION ONE

Adjectives are cheap. Examples are evidence.

Ask any writer to describe a brand's voice and you'll get adjectives: warm, confident, premium. Ask them to write in it and they'll reach for the same thing every good writer reaches for — an example. "Show me one you loved. Show me one you killed." That's not a shortcut. That's how voice is actually transmitted.

Sample Writings & Presentations is where you give the AI what you'd give a new writer on day one: the brochure you're proud of, the email that performed, the deck that closed the deal — and, just as importantly, the draft you rejected and why. The Voice Guide tells the AI what you sound like. The samples prove it, and they carry the specifics no guide ever captures: the named excursions, the way you describe a wine list, the sentence rhythm that reads as you.

What a good library changes

Without samples	With a working library
The AI writes from your keywords and Voice Guide alone — right register, generic detail.	Copy borrows your real vocabulary, structure and rhythm, and pulls destination-specific detail from your own materials.
Rejected drafts teach nothing; the same mistake reappears.	Anything marked Rejected is handed to the AI as "what NOT to do."
Product lines all sound the same.	Samples tagged to a Product Group or destination give that line its own evidence.
Style is a matter of opinion.	"Analyze style" turns a sample into explicit patterns you can review, apply or discard.

The stakes

Every generic sentence the AI writes is a sentence someone on your team has to rewrite. The library is how you stop paying that tax. Thirty minutes of uploading the right eight documents saves hours on every campaign after — and it's the single biggest lever on draft quality you control.

SESSION TWO

What's in the box

A tagged library, four ways to add to it, and a style-analysis tool that shows its work.

1. The library

Every item carries a **Title**, a **Date** and a **Purpose** — one of fourteen: Standard Presentation Template, Sales, PR, Internal Communications, Consumer Marketing, Website Scraping, Digital Product Brochures, Marketing Campaign Videos, Email Templates, Direct Mail Templates, Social Posts, Approvals & Rejections, Internal Experience Evidence and a legacy Video Script. Optionally an **Outcome** (Approved / Rejected), a **Product Group** and a **Creative Focus Group / Destination**. Filter by any of them; retag without re-uploading.

2. Four ways in

Option	What it takes	Reaches the AI?
A — Upload a file	Word, PDF or PowerPoint, under about 4.5 MB. PII- and virus-screened before it's stored.	PDF and .docx: yes. .doc, .ppt, .pptx: stored for reference only — save decks as PDF.
B — Link a Google Doc or Slides	Title, date and the link.	No — reference only. The page says so.
C — Short video for tone analysis	.mp4, .mov or .webm up to 30 seconds / ~25 MB. Visuals and on-screen text are analyzed (not audio); the file itself is discarded.	Yes, for campaign copy — as the saved analysis text.
D — Fetch from a URL or directory page	A direct PDF link or a "brochures" page (up to 25 PDFs listed; 20 MB each; text-based, not scanned).	Yes, when tagged to a Product Group or destination.

3. Analyze style

On any file-backed sample, **Analyze style** → asks the AI for one to three explicit observations about the writing — sentence length, how claims are supported, how the reader is addressed. They appear under **Style patterns learned** with **Reference / Apply / Remove**. Only patterns you mark **Apply** feed generation, and today that's read for the Consumer Marketing and PR purposes.

4. Weighting — not every sample counts the same

The platform weights samples by how strong a signal they are. Approvals & Rejections carry the most weight (3×), then Marketing Campaign Videos (2×), Brochures and Social Posts (1.5×), Email and Direct Mail (1.2×), Sales, Consumer Marketing and Website Scraping (1×), and Presentation Templates the least (0.5×). PR and Internal Communications samples don't feed brand copy at all — PR has its own path. So when you're choosing what to upload first, upload the approvals and rejections.

SESSION THREE

The six steps to a library that works

Path: CMO Dashboard → Configuration → Brand Book → Sample Writings & Presentations, or press Next from the Brand Book page.

01 Pick eight documents before you open the page

Two you approved and are proud of. Two you rejected (and you remember why). One brochure or product page. One email that performed. One social post. One sales piece. That set covers most of the weighting table and gives the AI contrast — "this, not that" — which teaches faster than volume.

02 Convert anything that isn't a PDF or .docx

Decks in .ppt or .pptx and old .doc files upload fine but their text is never read — they'll show as "on file" and contribute nothing. Save them as PDF first. If a PDF is a scan (image only), it won't be read either; use the original document.

03 Upload with the right tags — Option A

For each file: Title, Date, Purpose. Set **Outcome** to Approved or Rejected wherever it's true — Outcome is required when the Purpose is Approvals & Rejections, and a Rejected outcome is what turns a sample into a "don't do this" lesson. Tag a **Product Group** or **Destination** when the piece is about one line or place; leave them blank for brand-wide material. Press **Upload & save**. If the screen says the file is held for scanning, wait — nothing is stored until it passes.

04 Pull in brochures at scale — Option D

Paste your website's brochures page or a direct PDF link and press **Fetch & preview**. Pick the documents you want, check the extracted text reads correctly, tag each to its Product Group or destination, and press **Save as evidence**. This is how destination-specific detail — named excursions, onboard programs, menus — gets into campaign copy without anyone retyping it.

05 Analyze style on your two best samples

Open a file-backed Consumer Marketing sample and press **Analyze style** →. Read the observations. If one is true and useful, press **Apply**; if it's generic, **Remove**. Two or three applied patterns are plenty. Nothing happens until you press Apply.

06 Add Website Examples, then move on

Press **Next: Website Examples** →. Add up to 5 directory or site rules and 20 specific pages (include or exclude), then **Run analysis**. Directory and site rules need a single sitemap.xml. Website copy joins the samples as brand evidence for the Voice Contest, campaign copy and PR.

There is no approval step for samples.

Save puts an item in the library and it's live immediately. Approval only exists for style patterns (Apply). An admin can "Flag as error" to keep a sample visible but out of the AI, and Restore it later.

SESSION FOUR

Where the samples show up

Feature	What it reads from the library
Voice Guide draft and Voice Contest	All text samples (not video analyses); the contest counts "samples on file" toward readiness.
Campaign copy	Up to 3 samples per Purpose (about 900 characters each), Website Examples pages, Applied Consumer Marketing style patterns, and experience evidence for the campaign's Product Group.
Copy Interview contests	Samples scoped to the campaign's destination; untagged samples always qualify.
PR & Corporate Communications	PR-purpose samples only (up to 3), Website Examples, Applied PR style patterns.
Video Script contest	Experience evidence tagged to the destination; can also pick a saved sample as the reference script.
Voice Guide "What we observed"	Reports "Sample writings you provided" as on file / used.

Coaching notes from the field

Rejections are gold.

Most clients upload only what they're proud of. The ones who get the sharpest copy also upload the three drafts they killed, marked Rejected, with a note on why. Contrast teaches.

PDF or .docx, nothing else.

This is the mistake I see most: a library full of decks that were never read. If the "Analyze style" button errors on a file, that file isn't feeding anything. Re-save it as PDF.

Tag by line, not by mood.

Product Group and Destination tags are what let a Mediterranean itinerary sound different from an Alaska one. Untagged samples are brand-wide; tagged ones are targeted. Use both.

Fewer, better, current.

Only the top three per Purpose reach a given draft. Twenty stale emails don't help; three recent, representative ones do. Date them accurately — it matters.

Remove is immediate.

There's no confirmation. If you might want it back, ask an admin to Flag as error instead.

SESSION FIVE

Who does what, and your checklist

Role	Owns	When
Brand manager	Chooses the initial eight; tags Purpose, Outcome, Product Group; applies style patterns.	Onboarding; refresh each quarter.
Content / copy lead	Adds approved and rejected drafts as they happen, with the reason.	Ongoing — the library is a habit, not a project.
Product / destination owners	Fetch brochures and product pages by URL, tagged to their line.	Onboarding; when materials change.
Web / digital lead	Website Examples rules and the site analysis.	Onboarding; after site redesigns.

Setup checklist

Item	Where
Eight starter documents chosen, all as PDF or .docx	Before you start
At least two Approved and two Rejected samples, with Outcome set	Option A
A brochure or product page per Product Group, tagged	Option A or D
One email, one social post, one sales piece on file	Option A
Style analyzed on two Consumer Marketing samples; useful patterns Applied	Style patterns learned
Website Examples rules added and analysis run	Website Examples
Voice Guide's "What we observed" shows sample writings as used	Brand Book → Voice
Someone owns adding new approvals and rejections going forward	Your team

The closing thought

You can't describe your way to a distinctive voice. You show it, you mark what worked and what didn't, and you let the system learn from the evidence. Eight documents and thirty minutes. That's the whole ask.

Questions or a walkthrough with your team: reach your Verilume account lead.
